OPEN TO EVERYONE. FREE FOREVER.

Canton Signals.
Network Index Protocol.

Canton is where the world's institutions are quietly putting real assets on-chain.
Canton Signals turns that ecosystem into something anyone can explore, understand and build on.

INFINITI MARKETS LLC | 764 PROJECTS | CIPX INDEX | 30 CONSTITUENTS

Informational only; not investment, legal or tax advice, and not an offer or recommendation to buy, sell or hold any asset, token or security. Canton Signals is an open research project built from public sources. No affiliation with or endorsement by the companies, institutions or publishers named is implied.

Read this first.

This presentation is for discussion purposes only. It describes an open research project and a business plan, not an investment product.

Not an offer

Nothing here is an offer to sell or a solicitation of an offer to buy any security, token or other asset. Any offering by Infiniti Markets LLC or its affiliates would be made only through definitive documents, to eligible investors.

The index is information, not a product

The CIPX Index is a published calculation. It cannot be invested in through this presentation. Index figures shown are a dated snapshot, the index has only days of history, and past values say nothing about future ones.

Forward-looking statements

Plans for licensing revenue and future features are intentions, not results. They may change or fail to happen. No licensing revenue is reported to date.

Not advice

Nothing here is investment, legal, tax or accounting advice, or a recommendation to buy, sell or hold anything. Canton Signals does not manage money, hold client assets, or act as a broker, adviser or exchange.

No CIPX token has been issued

The index is a reference basket. There is no custody, verified reserve, mint or redemption. A token remains a design, subject to tokenomics, utility and regulatory review, and may never be issued.

Public sources, AI-assisted

Content is assembled from public sources and partly generated by AI, which can be wrong or out of date. Verify figures at the original publisher. No affiliation with, or endorsement by, any company, institution or token named is implied.

The most important network in finance is also the hardest to see.

Banks, exchanges and asset managers are tokenizing treasuries, equities and funds on Canton. The picture is scattered across press releases, private repos and hundreds of company websites. We bring it together, openly, with every claim linked back to its source.

INDEX CONSTITUENTS
30
50% Canton Coin, 50% ecosystem

As shown on canton.w3ai.io on 23 November 2026. The dashboard dates its registry figures 10 November 2026 and its GitHub figures 19 November 2026. Counts move as the registry is refreshed.

For most people, Canton is a black box.

Canton Network connects institutions that would never share a single ledger, and lets them transact privately, together. It is quietly becoming the backbone of tokenized finance.

Privacy is the point of the network. It is also why the ecosystem around it is so hard to follow from the outside.

Scattered

What is being built sits in press releases, private repositories and hundreds of separate company websites.

Announced, not verified

Most coverage repeats what projects announce. Few sources track what they actually ship.

No common starting point

Builders, investors, journalists and newcomers each assemble their own picture, from different facts.

Make Canton understandable to everyone.

Canton Signals exists to open the box. Owned and published by Infiniti Markets LLC, it combines a living registry, code activity, a news feed and long-form research in one place.

So builders, investors, journalists and newcomers can all start from the same facts.

01

A living registry

764 Canton projects: what they build, who backs them, where to find them.

02

Code activity

Thousands of public repositories tracked, so activity speaks for itself.

03

A news feed

Stories gathered hourly and rewritten into clear, sourced briefings.

04

Long-form research

White papers, deep dives and comparisons, free to read.

Nine lenses on one ecosystem.

Each opens inside the dashboard, free for everyone.

01

The Registry

764 Canton projects mapped in one place.

02

Code, not claims

Public GitHub repositories tracked for commits, contributors and releases.

03

Signal Feed

News from Canton and every registry company, gathered hourly.

04

Research

White papers, deep dives and comparisons for every audience.

05

Company Showcase

Every company profiled from its own website and directory listing.

06

Canton Galaxy

The whole ecosystem as an interactive 3D map, browsable by category.

07

Whitepapers

The actual papers from Canton and registry companies, in one library.

08

Ask the Analyst

A research assistant that answers from our own data, with sources.

09

Canton Calendar

Official events, network upgrades and community gatherings.

Every company building on Canton, in one place.

Profiles, websites, whitepapers and live views for each project, written from the company's own website and its directory listing, with links to its code and socials.

Building on Canton, or spotted something out of date? Anyone can add or correct a project.

in the 3D Canton Universe

PROJECT REGISTRY	Browse by category; open any company for its profile and sources.
CANTON SHOWCASE	Every company presented from its own website.
CANTON GALAXY	The ecosystem rendered as an interactive 3D map.

We track what projects ship, not just what they announce.

11,793 public GitHub repositories across 303 accounts are followed for commits, contributors, languages and releases, so engineering activity speaks for itself.

GITHUB ANALYTICS

Activity, measured

Commits, contributors, languages and releases across thousands of repositories.

DIVERGENCE MONITOR

Where words and work part

Shows where engineering activity and official announcements move in different directions.

KNOWLEDGE GRAPH

Evidence-cited links

Relationships between projects, repositories and categories, mapped visually, each with its evidence.

Rankings and showcases follow the evidence, not sponsorships. No project pays for coverage.

The fastest way to keep up with Canton.

News from Canton and every registry company, gathered hourly and rewritten into clear, sourced briefings. Every story names its publisher and links to the original article.

Stories are rewritten in our own words, with facts, figures and dates intact.
Nothing is copied.

Sizing the addressable pool, separating forecasts from live flow, and mapping ten sectors where Canton already carries real-world assets.

VALIDATOR SERIES · EIGHT PAPERS

How Canton’s node network actually works

Who runs it, how a transaction commits, security, incentives, costs, governance and what to watch next.

Titles and counts as listed on canton.w3ai.io/research on 23 November 2026. Forecast figures quoted in the research belong to their original publishers.

The index for the Canton economy.

One reference level for the whole Canton token stack. CIPX anchors half its weight in Canton Coin. 40% is shared equally by criteria-met Registry and partner tokens, and 10% by other publicly traded Canton registered tokens.

Weights reset every day at 00:00 UTC. A missing price pauses the reset; it is never booked as zero. No CIPX token has been issued.

MCP SERVER · FOUR TOOLS, ONE ADDRESS

search_ecosystem

Keyword search across companies, homepages, GitHub summaries, Canton pages and news.

get_project

The full profile of one company, with repositories and social links.

list_projects

Registry companies, optionally filtered by category.

ecosystem_stats

Headline counts for the current snapshot.

The open endpoints only return information already published on the site. AI-assisted answers can be wrong; open the linked source before relying on one.

Intelligence should be shared, not hoarded.

The more people who understand Canton, the stronger it becomes.

01

Open by default

Everything we publish is free to read. No account walls, no gated reports.

02

Sourced, always

Every story, figure and profile links back to where it came from.

03

Signal over noise

We track what projects ship, not just what they announce.

04

Built with the community

Corrections, tips and new projects come from readers.

05

Independent

No project pays for coverage. Rankings follow the evidence.

06

Free forever

The registry, the feed and the research stay free.

For every audience: builder, institution, journalist or newcomer. The same facts, each with its source and date.

Open at the front. Licensed underneath.

Canton Signals is owned and published by Infiniti Markets LLC, on the same AI data and automation stack as the Issuer Intelligence Platform for public companies.

The open dashboard stays free. Revenue is planned from enterprise data and API licensing.

MODEL	Open intelligence, freemium SaaS, and enterprise data and API licensing.
ACCESS	Free. Open access, no login required.
WHO IT SERVES	Institutional investors, banks, asset managers, broker-dealers, hedge funds, RWA issuers, blockchain developers and Canton Network participants.
INDEX	The CIPX Index: 30 constituents, base 1,000 set on 19 November 2026, rebalanced daily.
PROPOSED	A CIPX token, not issued, subject to final tokenomics, utility design and regulatory review.

No licensing revenue is reported for Canton Signals to date. No CIPX token has been issued, and nothing here is an offer of any token.
